## Products > Standard hex-head magnesium anode rod

### Standard hex-head magnesium anode rod

#### What's included

- a .84-inch-diameter (a quarter more anode than what usually comes with a 6-year-warranty water heater) magnesium hex-head **anode rod** (about 46 inches of overhead clearance needed)
- pipe-thread seal tape
- service sticker
- instructions

Fits all water heaters that come with a hex-head anode.

#### What does it do?

- The anode will keep your tank from rusting and breaking.
- The tape will enable you to remove the anode in future to check it.
- The sticker will help you remember when you installed it.

#### Tools needed

Socket wrench and 1 1/16-inch socket. For further details, check out the [Tools](#) page and [Know-how](#).

#### Return policy

Merchandise in original condition can usually be returned for a full refund of the purchase price, not including shipping. E-mail [mail@waterheaterrescue.com](mailto:mail@waterheaterrescue.com) for instructions and authorization.

#### Ordering Details

The products offered here are designed to make water heaters last longer, or solve specific problems. Installation is potentially do-it-yourself, **but if you have the least doubt about your abilities, we suggest that you obtain expert help.**

Shipping is by UPS within the contiguous United States. UPS does not deliver to post boxes. Allow up to a about week for delivery. Hawaii and Alaska are only served by Priority Mail and can use a post box. We do not ship outside the United States.

#### Important: Before you order

Are you ordering the right anode? This anode requires its own port in the water heater and is usually a replacement. Make sure you have a hex-head rod in your tank and not a combo (outlet) anode.

**If you have any doubts about what you're ordering**, be sure and e-mail your questions to us. We want you to order only what you need!
